

DSCI 560 Lab 5 Meeting Notes

2/10

- Discussed meeting plan for the week
- Assigned roles and responsibilities to each team member
- Outlined the initial steps for implementation

2/11

- Connected Reddit and set up PRAW for data collection
- Setup and connected MySQL database
- Started initial code implementation, including scraping and database insertion

2/12

- Verified API connections and ensured data retrieval was functioning correctly
- Conducted initial tests on data preprocessing methods
- Made iterative improvements to code based on test results

2/13

- Completed the final implementation of the scraper, database storage, and preprocessing functions
- Ensured error handling and logging mechanisms were in place

2/14

- Wrote and reviewed the lab report
- Conducted a final code review and tested the automation script
- Discussed potential improvements and prepared for submission
